EnviroManager

Keep up to date on the latest environmental regulations and reduce the risk of heavy fines.

EM

EnviroManager is a simple, user-friendly module of OneOcean that allows users aboard and ashore to stay informed of environmental regulations in force in areas around the globe. With data from over 500 environmental zones and 170 nations, EnviroManager has a robust database that is kept up to date by a dedicated team who actively search and verify regulations.

For the user, the result is a much lower risk of faulty discharges and the commercial repercussions that follow.

EnviroManager provides end-to-end clarity on all environmental requirements, enabling users to plan a fully compliant voyage with peace of mind.

The challenges

With more and more maritime environmental regulations in effect throughout the world, there is an ever-growing need to stay up-to-date on the latest environmental restrictions, to protect the environment and avoid penalties.

Managing the compliancy requirements across a fleet is a complex task, as many regulations will relate to specific vessel types, equipment onboard and location.

Keeping track of all regulations, determining relevance and disseminating information accurately to crews onboard is time-consuming and risks errors.

Baselines can often be misunderstood, and cetacean habitats missed, leading to illegal discharges or illegal presence in restricted zones, potentially resulting in heavy fines and devastating environmental implications.

What it enables?

Reduced risk
Reduce risk of illegal or faulty discharge.

Regulatory compliance
Displays the latest worldwide environmental legislation in one single platform.

Accurate ZET
Automatically calculates Zone Entry Time (ZET), the distance and time to entry in territorial waters.

Waste and fuel handling
Optimise waste and fuel handling with timely, relevant information displayed to determine when to switch between different grades of fuel.

Environmental management
Add to ISO 14001 environmental management processes.

Profile
Strengthen the environmental profile of the organisation.

How it works?

Traffic light display tiles
Traffic light tile notification system makes it easy to understand what action can and cannot be undertaken for a specific waste stream at a given location.

Real-time guidance
Real-time guidance that only displays regulations relevant to the vessel's specifications.

Fully updated
Dedicated team continuously monitoring and updating regulations in over 500 local, regional and national areas in the OneOcean database.

Marine-protected areas
Understand the locations of marine-protected areas in relation to the vessel and its planned passage.
