

LogCentral

Access, record and manage logbook entries in one place.

LogCentral is an industry-leading reporting solution for record-keeping, monitoring, reporting and compliance verification. This market-leading tool enables crew to rapidly complete logbook entries with accuracy and ease.

The challenges

Providing accurate information to authorities in time-limited situations is an essential requirement for mariners. Omissions in information and delays in time taken to provide these can lead to penalties and, in some cases, can impact the basic operation of a vessel.

Record books are an essential part of working life onboard. The time taken to complete paper logbooks can be vast. This data is held onboard for years and sharing them with shoreside teams can be difficult.

Further to this, paper logbooks cannot be easily analysed or understood by shoreside teams, preventing them from properly planning and building in efficiencies.

One central solution

Operational and management teams have instant access to all logbook entries made across their entire fleet, meaning they can monitor fleet activity, conduct trend analysis and submit records to regulatory authorities.

What it enables?

Compliance

Log and demonstrate compliance with accuracy and ease.

Record book management

Access and manage electronic record books, such as where a vessel discharges, its waste management, air emissions or bilge management.

Performance management

Analyse trends, compare vessels and set benchmarks.

Instant access

Operational and management teams have instant access to log entries across their entire fleet.

Remote auditing

Shoreside staff can remotely audit any record book at any time through FleetManager.

Accuracy

Elimination of missing entries and reduction of incorrect entries.

How it works?

Easy interface

Easy and intuitive interface that anyone can use.

User alerts

Warnings are shown if some operations are not allowed, e.g. discharge of ballast water.

Data synchronisation

Synching across all workstations and ashore.

Formatting

Clear and correctly formatted entries as required by MARPOL annexes.

Security

Each user has a unique Username, Password and PIN, and all data is encrypted.
