SeaTab

Instant and portable situational awareness.

ST

A turnkey solution providing instant situational awareness and portable ENC viewing. SeaTab's easy-to-use interface provides live vessel position with AIS Pilot Plug or GPS unit to identify where the vessels are in the vicinity on official ENCs.

The combination of enhanced kernel capability to render ENC faster and official ENCs on a portable device provides instant navigational visibility in real time. It can also be an effective portable training tool shoreside and seamlessly connects with the ecosystem of OneOcean products for efficient collaboration between vessel and office.

OneOcean

The challenges

The concern among captains and navigation officers is the loss of accurate movements on official charts if the ECDIS goes down, as it will leave them susceptible to collisions. The situation becomes critical when failures of the ECDIS systems happen in restricted navigable waters, such as in the approaches to ports, canal or river passages. Tenders or smaller sub-vessels may struggle when entering ports or shorelines if they do not follow the right channel and do not have full visibility given by an ECDIS.

One portable solution

SeaTab, as a portable solution, is an ideal tool for tendering groups of passengers, giving the crew instant visibility, situational awareness, and confidence of navigating on official electronic charts even away from the bridge.

What it enables?

Visibility

Greater efficiency and visibility in navigational emergencies.

Portable and available

Keep abreast of the passage wherever located on a vessel.

Emergency response tool

Supports emergency response actions with a 50NM situation awareness, enabling navigation to safety and avoiding potential collisions.

Paper free

Reduces paper chart inventory, saving time and money.

How it works?

Easy-to-use interface

Simple to use with no training required.

Live positioning

Live vessel position with AIS Pilot Plug or GPS unit.

Video and audio communication

Video and audio recording capability for ship-to-shore communication.

Simulation

Aid in collision avoidance decision-making in case of a navigational emergency.

Mitigate cyberthreats

Greatly limits the risk of cyber threats as a portable device with a locked version of windows and preloaded software.

Choice of two tablets

SeaTab Pro

Suitable for vessels that have a larger ENC's inventory for a faster ENC rendering.

SeaTab Go

Suitable for vessels with comparatively smaller ENC inventory, e.g. liners.
