

EnviroManager+

Instant fleet-wide compliance
at your fingertips.

EnviroManager+ equips shoreside teams with the capability to deploy and communicate company policies and standards to all vessels in your fleet in a consistent and uniform way.

Mandating company policies throughout a fleet is no easy task. The policies can be broad in scope and may exceed those standards set by the regulatory authorities. It is essential, therefore, that they are clearly communicated and easily understood. A task made more complicated by the fact that the regulations may depend on variable factors, including the ship's location, onboard equipment and cargo to name a few.

There is always the risk that errors and inconsistencies can occur in the communication and implementation of these policies and fragmented information can create difficulties for your onboard crews. They need to know precisely when and where the company standards are applicable and what compliance procedures should be taken.

Using position-based guidance, EnviroManager+ delivers this clarity across the entire fleet, by vessel type or location.

OneOcean

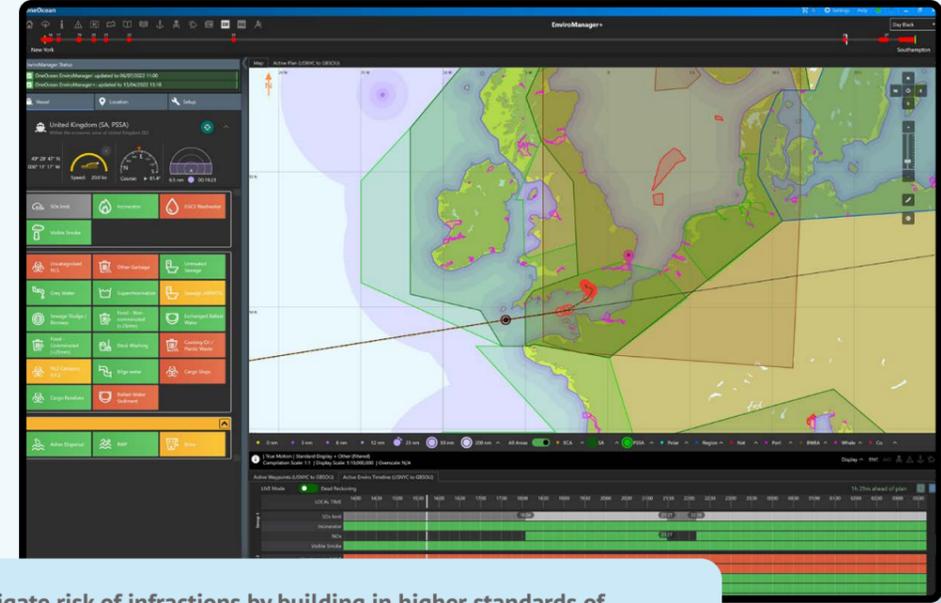

A consistent and standardised approach

EnviroManager+ provides your onboard crews with a clear understanding of company standards, policies and regulations in relation to external ones. Company policies and external regulations are clearly denoted next to the chart interface. This same display is visible throughout the fleet, providing consistency in training protocols and enabling smoother crew changeovers. The system can be customised according to each ship's particular requirements.

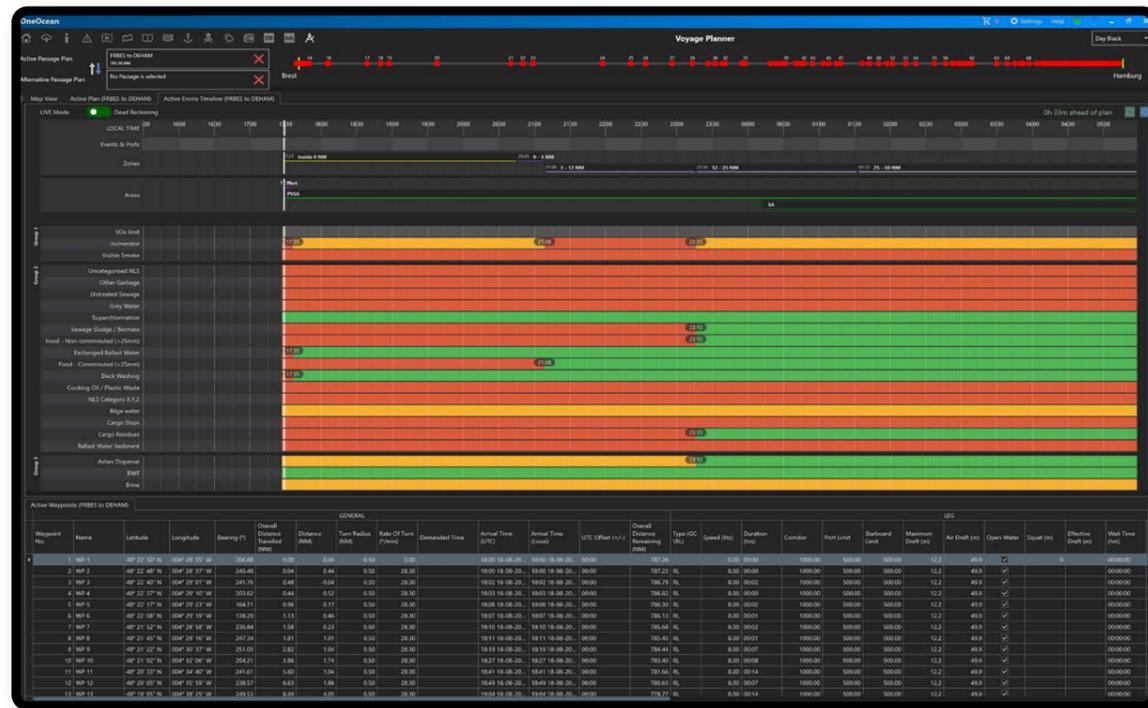

A smarter solution

With EnviroManager+ you get a granular view of the navigational and environmental events happening throughout the voyage. An active timeline is generated in the planning process based on the parameters for routing, the ship specifications, schedules and your company's policies.

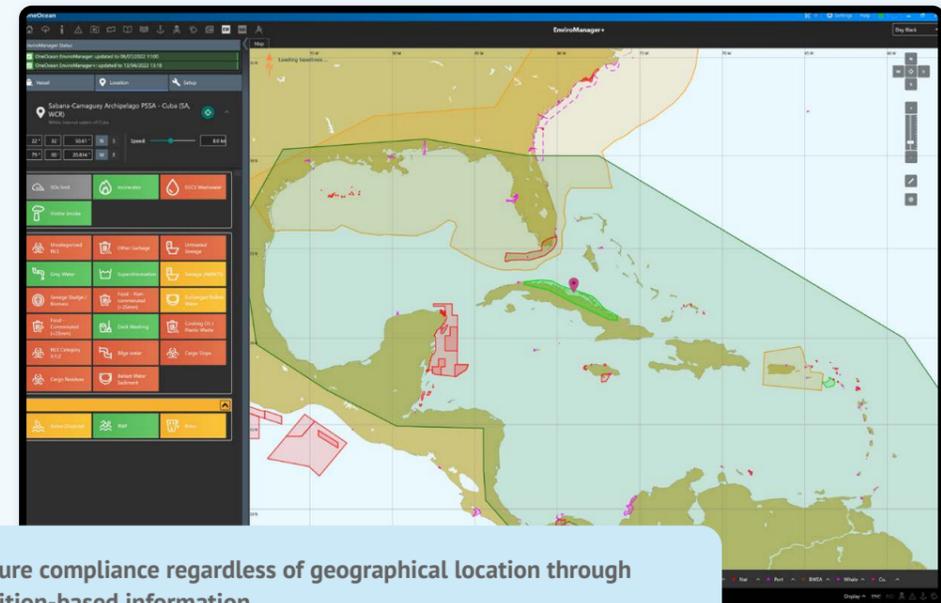

The environmental events are broken down into a comprehensive list of waste streams. These can be customised and grouped according to your specifications. The events are colour-coded to make it clear exactly what can take place safely and legally during a rolling 12-hour window. All this is based on when the ship departs, where it is currently located and on its speed.

- Mitigate risk of infractions by building in higher standards of compliance requirements
- Know what is and is not permissible with consolidated guidance shown all in one place
- Make and deploy changes instantly via the web-based application

- See a detailed timeline breaking down environmental actions that can and cannot occur at your current location and speed
- Reinforce company policies and values with clear and consistent compliance instructions

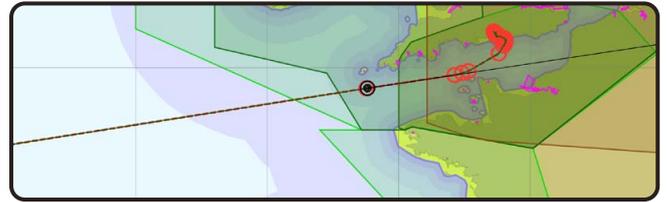

- Ensure compliance regardless of geographical location through position-based information
- Customise the view onboard to provide a standardised understanding throughout the fleet

Key features

The Positioning Tool

This provides vessels with clear guidance based on their location. Crews get the relevant information when and where they need it. Tiles can be configured from shoreside to be displayed in order of importance.

The Active Timeline

The Active Timeline integrates with Voyage Planner to provide a granular view of navigational and environmental events taking place throughout a voyage.

The Authoring Tool

Company policies can be added and applied to any location, waste stream or bespoke category. The solution is fully customisable.
