

PassageManager

An intuitive solution for planning maritime voyages quickly, safely and efficiently.

PassageManager is an efficient, digital solution to aid in preparing a voyage plan that is safe, timely and compliant with all regulations.

Determining the best sea route for getting your vessels to their destinations as quickly, safely and cost-effectively as possible can be a complex and time-consuming task. So many things need to be assessed; cargo requirements, the weather, tides and currents, the environmental regulations in force, port requirements, any NavArea warnings or alerts issued, the scheduling requirements, and of course the anticipated fuel costs, to name just a few.

PassageManager helps you assess all these factors and plan your voyages accordingly by accessing and visualising all this information in one robust system within minutes. The solution saves valuable time; allowing you to plan the optimal voyage that takes all voyage requirements into account.

If plans change once the voyage is under way - an unforecasted storm or change in destination, for example - users can quickly assess all necessary variables to update the passage plan and sail with ease.

OneOcean

A smarter solution

PassageManager makes it easier and quicker for crews to collate all required elements for effective voyage planning. Users aboard can access the latest data, including routing data, weather, Notices to Mariners, current warnings and alerts.

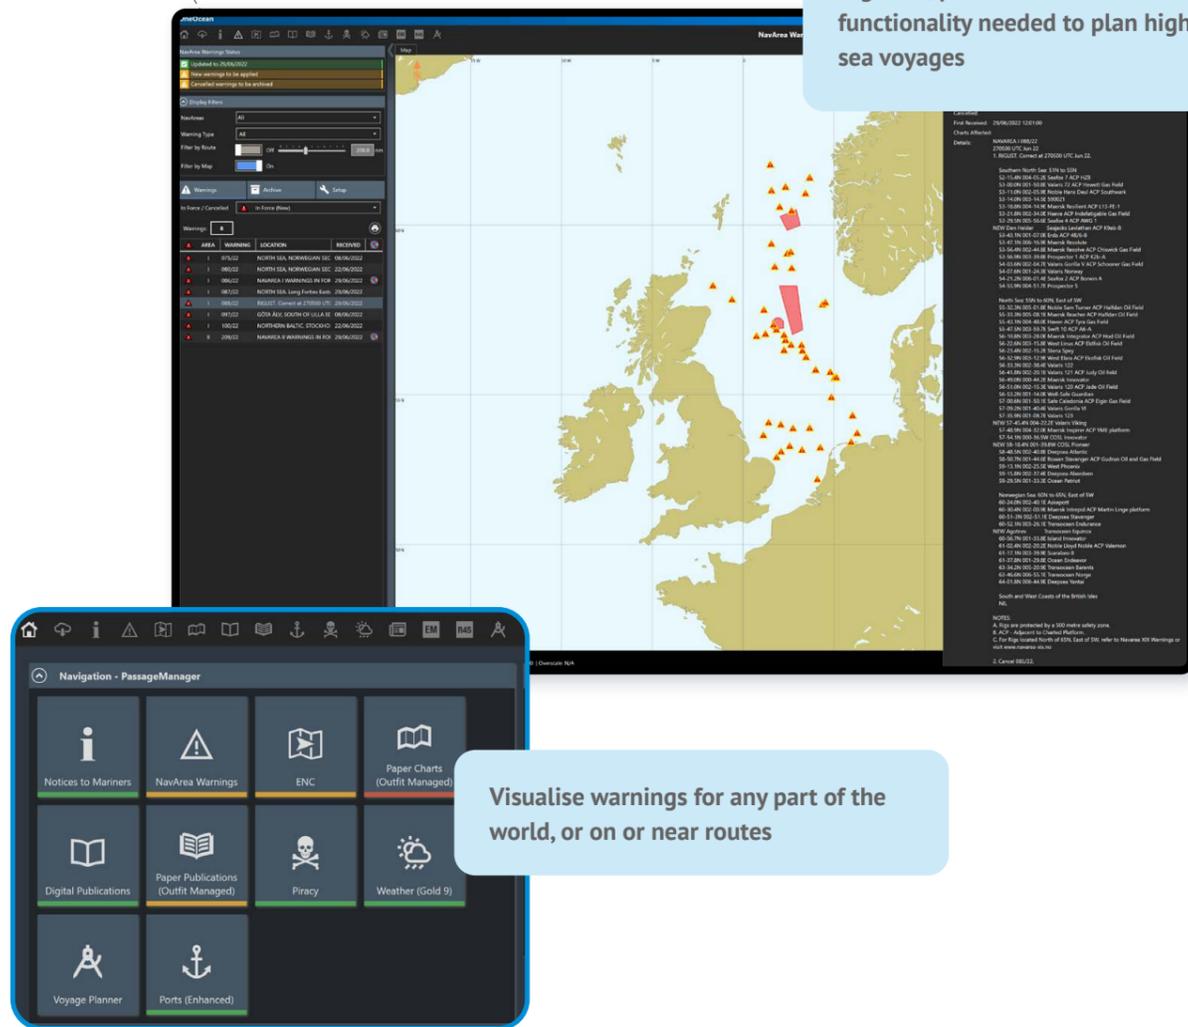

The solution is comprised of several modules that together provide the data, functionality and big picture view required to plan high-quality voyages.

Your crews will always be accessing the latest data, charts, warnings and more from a robust database maintained by the OneOcean team.

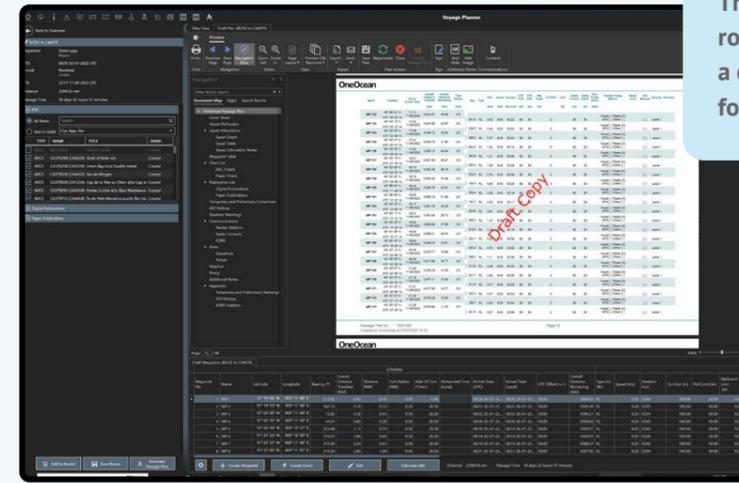

Assess and build ECDIS-compliant routes that are tailored to the specifications of your vessels. Set safety and compliance thresholds that ensure adherence to company policies, such as UKC levels or weather limits. Benefit from a visual interface that displays weather elements, hydrographical data, danger zones and restricted areas.

Benefit from several modules that, together, provide the data and functionality needed to plan high quality sea voyages

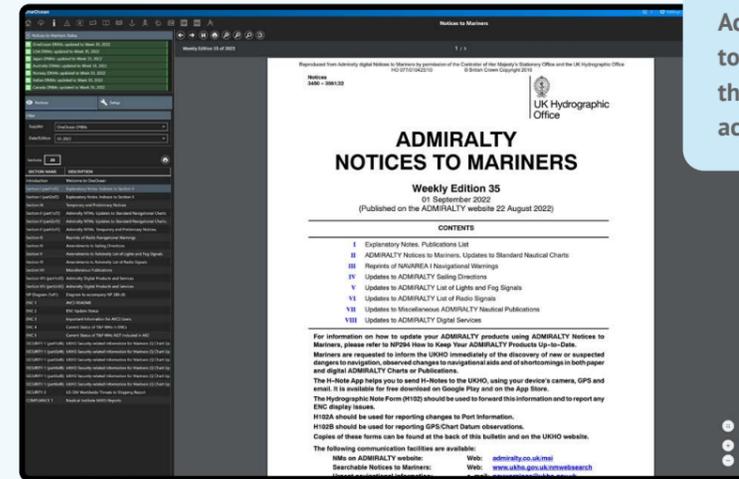

Visualise warnings for any part of the world, or on or near routes

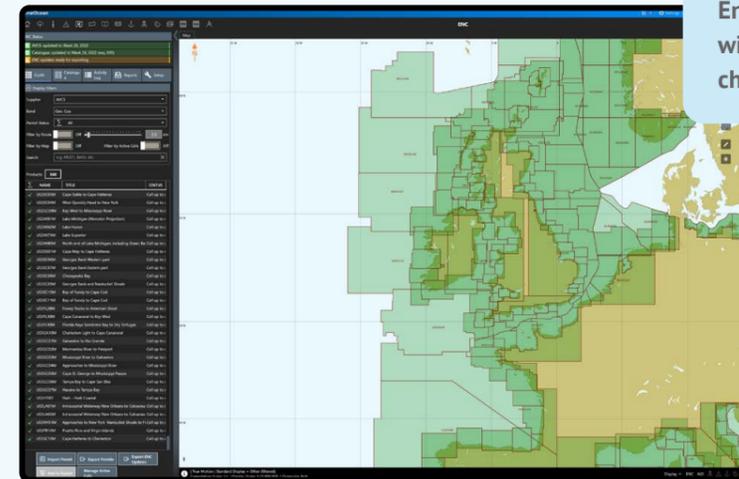

Through Voyage Planner, plan detailed routes from end-to-end, culminating in a comprehensive passage plan, ready for approval

Access official Notices to Mariners to ensure your voyages always take the most up-to-date information into account

Ensure outfits are always up to date with the latest charts. Easily purchase charts as needed

The PassageManager Modules

1

Voyage Planner

Gather data, evaluate routes and perform calculations in a fraction of the time. Perform complete, end-to-end passage planning in one digital workflow.

2

ChartManager

Manage and keep updated ENC's, paper charts and Notices to Mariners.

3

Weather

Access detailed, up-to-date weather forecasts on a variety of meteorological factors and perform in-depth weather planning.

4

Ports Data

View comprehensive port data on thousands of facilities around the world, including terminal and even berth-specific data.

5

Publications Manager

Manage electronic and paper outfits and corrections.

6

Piracy Alert Data

View areas where piracy attacks have recently been reported and risk is high.

7

NavArea Warnings

View global Navigational Area warnings that are updated daily.
