

Regs4ships

Simplify regulatory compliance onshore and aboard.

Regs4ships is the only solution to today's highly complex maritime regulatory environment. The fully digital toolset contains a comprehensive, searchable database of official regulatory documents from many sources, including the IMO, the ILO and numerous flag states.

The OneOcean team manages and updates a comprehensive digital library of live and archived official nautical documents, presenting them within a single, convenient and time-saving portal.

The search functionality encompasses multiple sources of regulatory requirements, enabling users to easily verify regulations pertaining to their routes, vessel type and cargo. Just as crucial is that Regs4ships clearly lists and displays forthcoming regulatory updates, and indicates where documents have been amended or archived.

The solution replaces the manual process of sourcing, researching, collecting, reviewing, updating, distributing and tracking regulatory changes on a vessel-by-vessel basis.

OneOcean

One central solution

Keeping up to date with multiple, complex and ever-changing regulations is a complicated task for ship owners and operators. Remaining compliant, however, isn't an option. Remove uncertainty and gain peace of mind that all stakeholders are viewing current regulatory documents across all relevant sources.

Demonstrated compliance

Regs4ships provides access to the most current versions of official nautical publications. The solution is maintained by OneOcean's team of experts, who continually update its database with the latest Flag State and international regulations from the IMO, ILO, EU, WHO and more.

All updates are performed in real-time, meaning crews are never manually piecing together amendments or consulting out-of-date information.

Mitigate risk of non-compliance and demonstrate to inspectors that crews have continual access to all official publications required in their carriage.

Track amendments easily

When amendments to live documents are made, users can access annotations to clearly understand exactly where text was updated and ascertain the implications of changes. If necessary, they can also access and search through previous, archived versions of documents.

Regs4ships is available on and offline, providing continuous access to the data needed to scope regulations relevant to voyages, vessels, crews and cargo, supporting operations in remaining fully compliant.

- Search through flag state documents or international source
- Filter documents from a list of pre-defined keywords, type or classification
- View or exclude results from archived documents

- See the latest regulatory updates
- Favourite and easily access important documents for quick reference
- Robust search functionality with suggested and recent keywords

- International content sits within a dedicated dashboard with seven distinct categories
- Pre-defined popular links give easy access to frequently referenced publications

- Direct access to popular conventions and publications from the sidebar
- Easily view forthcoming amendments and recent updates
